
a Identification by four methods
chance
ER · decrease
ER · maintain
Cue · reward cues (all)
Cue · natural reward cues
Cue · drug cues
PS · demand
ER · reappraisal (dec + inc)
PS · word problems
DM · perceptual decisions
Social · others
Social · social communication
EF · working memory
EF · inhibition
PS · calculation
0.0

mean
b ER · decrease
ER · decrease reference
86 studies, reliability 0.84
NeuroVLM, “decreasing negative emotion”
r = +0.04 with the reference
Cue · drug cues reference
r = +0.46 with the NeuroVLM map
c Cue · natural reward cues
Cue · natural reward cues reference
50 studies, reliability 0.72
NeuroVLM, “natural reward cue reactivity”
r = +0.34 with the reference
Cue · drug cues reference
r = +0.47 with the NeuroVLM map
