 reference, NeuroQuery & Neurosynth: z > 2.33 (p < 0.01, uncorrected, one-sided) NeuroVLM: top-k voxels matched to the reference's p < 0.01 extent (its output is not a z map) axial z = [-18, -2, 14, 30, 46]
sorted: projects by mean NeuroQuery r² (best first), targets within a project by reference ceiling (most reliable first)
